Abstract:

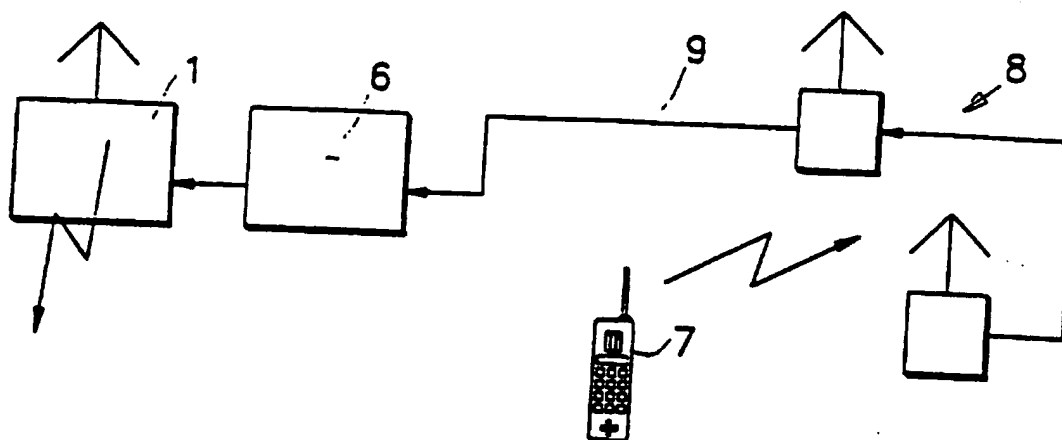

DE 4424380 A

A radio transmitter (1) transmits coded video signals to a receiver (2) and can be recorded (4) or displayed (3) after being decoded (5). The selection of the transmissions required can be made with the aid of a mobile telephone unit (7).

The signals are transmitted over the mobile telephone network (8) and a data line (9) coupled to a management unit. This allows the appropriate decoding data to be selected.

USE/ADVANTAGE - Allows reliable handling of video programme selection.
